

Easily Moved from System to System

© HFT®

The **PurgeGate**® System is designed to fit onto systems by HFT®, such as [PurgeElite](#)® Inflatable Pipe Purging Systems, as well as any other similar devices to prevent the dams bursting due to over inflation.

[Inflatable Tube, Pipe and Pipeline Weld Purging Systems](#) are at risk of overinflating during the weld purging process due to unwanted manipulation of gas pressure and flow settings.

PurgeGate® Valves will prevent unwanted and undesirable changes from causing weld failure due to lost purge as a result of dam burst.

These fit all system sizes and can be moved from system to system as the weld size is changed.

The **PurgeGate**® is fitted as standard onto the range of [QuickPurge](#)® and [HotPurge](#)® Pipe Purging Systems and can be purchased as an accessory for [PurgeElite](#)® Tube and Pipe Weld Purging Systems.
